

## 7th Tunnel symposium of SIGRIST-PHOTOMETER

A wide range of topics around smoke and fire detection, visibility control, illumination, acoustic in tunnels or incident management was presented by highly competent speakers to the industry audience at the 7th tunnel symposium in Munich. A visit of the Richard-Strauss-Tunnel, shortly before its official opening, was an impressive closure of this two-day event.

SIGRIST-PHOTOMETER held its already 7th tunnel symposium. The latest program was again created based on inputs from users and covered a wide range of subjects, all about safety in tunnels. Highly recognized and competent speakers presented interesting information to the 90 participants, who discussed the learned during and after the presentations.

The event gave room to care for existing contacts but also to find new contacts in the circle of participants, representing operators, planners/engineering, and manufacturers. They all felt comfortable in the TUV Süd Academy where the symposium was held.

The second part of the event lead to the Richard-Strauss-Tunnel. An introduction about the history of the construction was followed by a visit through the tunnel and its infrastructure. This gave many impressions of this modern tunnel that was shortly before its official opening. After refreshment in the tunnel the satisfied visitors made their way home again.
